At one point I decided that I needed to create a game that would get more attention than "The Darkness". As such, I developed Metro Last Light Redux. I knew that most people would be playing the game in windowed mode, so I created the game with high-quality settings to fit that window. As such, I set the game to use a high-resolution framebuffer, use a modded Microsoft DXT texture compression, use a high-quality VBO instancing, and use the latest Nvidia PhysX. For audio, I use the latest OpenAL. Once I released the game, people asked me if I could tweak the game for better performance. I started playing with the game, and noticed that many of the settings could be changed and tweaked. As such, I created this tweak tool to make it easier for users to change their settings for Metro Last Light Redux. I have included all of the settings that are possible to change with this tool. It also allows for the options to be saved for easy access. I hope you enjoy using this tool!
